

COMPANY PROFILE

Bakker Barendrecht, founded in 1930 and a member of the UNIVÉG Group since 2005, is one of the largest fruit and vegetable companies in the Netherlands and a key player in the production of fresh produce. About 400 permanent employees work in the main facility in Ridderkerk, where products from dedicated growers are processed (Holland Crop Ossendrecht). Bakker processes almost 2,000 tons of fruit and vegetables every day, or about 70 million crates a year. Bakker's main customer is a leading Dutch chain of supermarkets. Their long term relationship is based upon an unique partnership model.

CORE BUSINESS

Trade, logistic services and research & development (R&D) are the company's key activities.

- **Trade:** Sourcing (buying and contract growing) is done both in the Netherlands and abroad, from a

network of dedicated suppliers. In the Netherlands about 200 dedicated growers tailor their production (in total some 3,500 hectares) to Bakker's demand.

- **Logistic services:** A wide range of services from logistic planning and operations to quality control and transport (partly by own fleet). Operations include sorting and packaging of fruit and vegetables, ripening of bananas/mangoes/avocados, order picking and distribution. A logistic division in the Czech Republic transports refrigerated products.
- **R&D:** Research into new developments in fields such as food safety, environment, health and taste, plus guidance and support for the network of dedicated growers.
